Objective Senior Systems Engineer with over 15 years of Information Technology experience seeks a challenging role to leverage my technical proficiency, strategic problem-solving skills, and commitment to driving operational excellence in a dynamic environment

Education **Florida International University, Miami, FL**
Bachelor of Science, Electrical Engineering

Certifications Google Cloud Leader Certification
Microsoft Certified Azure Fundamentals
Microsoft Certified Azure Administrator – *candidate*
Microsoft Certified Azure Artificial Intelligence Fundamentals
Microsoft Certified Azure Artificial Intelligence Engineer Associate
Microsoft Certified Professional
Microsoft Certified Systems Engineer
VMware Virtual Certified Associate – Data Center Virtualization 5.5
VMware Virtual Certified Professional – Data Center Virtualization 5.5, 6.0
Zerto Certified Professional Basic – 4.5, 5.5

Employment **eSolutionsFirst, Tampa, Florida**
Systems Engineer (Contractor), March 2024 – March 2026

- Co-managed the Intune and SCCM/MECM environment to enroll, configure, secure, and update devices, deploy and protect applications and control which users and devices can access organization resources
- Utilized Entra ID and Active Directory in a hybrid environment to provide device registrations and unified identity solutions for both cloud and on-premises resources across the US and LATAM countries enabling seamless access to applications and services
- Responsible for administering and troubleshooting Qualys and BigFix related issues for the US and LATAM environments which consist of over 10000+ nodes ensuring patch compliancy, application updates, and vulnerabilities are eliminated preventing operational downtime
- Served as a Tier 3 escalation point for the digital desk (helpdesk) and junior engineers for LATAM countries, providing advanced troubleshooting, training, support and resolution
- Managed IAM in Microsoft Azure for onboarding and offboarding user identities, application, resources and virtual server access
- Designed, built and implemented MCP servers used to publish indexed content to multiple agents as part of the Capstone project in Artificial Intelligence (AI), improving scalability and manageability
- Filtered questionnaire response data for a sentiment analysis using AI Foundry and Python scripts in Azure, improving the accuracy of AI-driven insights
- Maintained security compliance for VMware VSphere and Microsoft Azure ensuring legal and regulatory requirements are met
- Managed 16 Cisco UCS blade servers and hosted software applications using Cisco UCS Central in a multi-domain environment, ensuring seamless operations and system reliability
- Managed over 10000+ virtual servers in the US running VMware 7.0.3/8.0.2 with Microsoft Windows 2016, 2019, 2022 and RHEL 8.6 and 8.8 in the Dallas and Montvale datacenters ensuring optimum performance and reliability

1010Data, New York, New York
Systems Engineer, July 2022 – January 2024

- Designed and maintained conditional access architecture, including guest and contractor access, device filters, session controls, and resources, balancing security usability with Azure Virtual Desktop (AVD) production, development and test environments
- Deployed and maintained endpoint protection with CrowdStrike and resolved security vulnerability issues with patches, updates and hardening efforts to meet security compliance requirements
- Maintained operations of 3 datacenters, securing over 1500 virtual and physical servers, cloud storage accounts, blob storage, resource access (IAM), server onboarding/offboarding access to maintain security compliance
- Built Azure Virtual Desktop environments to improve cloud administration using Host Pools, Scaling Plans, Scaling Schedules, Application Groups, Workspaces, MSIX, Image Creations, Refreshes and Development, FSLogix and Azure Entra ID (IAM)
- Managed the VMware VSphere environment which consists of 3 datacenters, 100 physical hosts, and approximately 350 virtual machines located in Virginia, New Jersey, and New York datacenters, ensuring high availability, performance, and security of applications while maximizing hardware efficiency and controlling costs
- Performed VMware patch updates on a quarterly basis for the vCenter server 7.0 and ESXi 6.7/7.0 hosts operating system to the latest patch level to remove vulnerabilities and ensure security compliance
- Responsible for BIOS, Firmware and iDRAC upgrades on host servers and decommissioning host servers in all 3 datacenters, including documenting removal process, creating change management tickets, and updating GLPI server inventory database to meet audit requirements
- Built PowerShell scripts to automate Veeam backups and Zabbix network monitoring tools eliminating repetitive manual tasks
- Deployed and evaluated Ubuntu Linux Servers ZTP (Zero Touch Provisioning) automation build process and efficiency
- Built new Azure Virtual Desktops (AVD) in production, development, and test environments, including building documentation on how to build these environments from beginning to end to help improve AVD build efficiency

- Administered SCCM to manage enterprise endpoints, software distribution, application deployments, compliance, and system updates across Windows environments
- Utilized Microsoft Intune/Endpoint Manager to configure, manage, and monitor Windows devices, applications, security policies, and endpoint compliance
- Managed a hybrid Entra ID/Active Directory environment to deliver a unified identity solution across LATAM countries, enabling seamless access to cloud and on-premises applications, resources, servers and storage
- Managed and monitored servers using ZVM appliance and configured VRAs to help troubleshoot servers using Zerto for replication across LATAM countries and served as liaison for all engineers in remote locations with troubleshooting Zerto related issues
- Administered Exchange Online with Forefront Online Protection for Exchange (FOPE), Proofpoint, and Mimecast email filtering, in a hybrid mail flow, distribution (static/dynamic) list lifecycle, and mobile mail with iPhone/Android via Exchange ActiveSync
- Performed over 50 virtual machine migrations from VMware to Hyper-V saving the company approximately \$480,000 a year in VMware licensing and support fees
- Served as a Tier 3 escalation point for the helpdesk and junior engineers in Miami and LATAM, providing advanced troubleshooting, training, support and resolution
- Responsible for daily operations of 15 datacenters, 500 servers, 18 SANs, backup tapes and 15 temperature monitoring nodes, including training junior engineers remotely resulting in significant travel cost savings of approximately \$20,000 a year
- Managed 30 ESXi hosts, 12 Hyper-V hosts and over 500 virtual servers with Distributed Resource Scheduler and High Availability in the United States, Central America, South America, and Caribbean data centers maintaining system reliability
- Upgraded 2 VMware vCenter servers and 30 Hosts from 5.1 to 5.5 to 6.0 to 6.5 at various data centers in the United States, South America, and Caribbean to improve cybersecurity posture, incorporate feature improvements and maintain vendor support
- Provisioned datastores in vCenter and Virtual Machine Manager (VMM) presenting new volumes to ESXi and Hyper-V hosts on the same cluster to increase storage capacity and availability
- Provided support of VMware and Hyper-V environment while maintaining adequate storage space, network connectivity, security compliance and patch updates to avoid business interruptions
- Implemented industry best practice maintaining server security, operating system and application updates current for all Intel based systems across the company
- Upgraded Commvault environment from 9.0 to 10.0 to 11.0 backup software, including managing deployments at remote offices, provisioning storage, implementing policy schedules, applying deduplication policies, and ensuring scheduled backups and restores complete successfully to protect company data against cyberattacks and security breaches
- Provisioned disk space as required using various storage area network (SAN) equipment: Pure (Flash Array), NetApp FAS 2020/3240/8020/8040, EMC 3100/3150/CX300/VNX E in a multi cluster server environment to prevent any business interruption
- Monitored the network and server environment using Solarwinds Orion and Solarwinds Virtualization Manager monitoring hardware, software, network latencies, surpassed disk space thresholds, memory utilizations and CPU loads to ensure hosts and virtual machine reliability and serviceability
- Managed Azure security administration and disaster recovery using Entra ID (IAM), Intune (MDM, MAM), storage accounts and ASR (replication), to maintain security compliance, business continuity and availability of workloads
- Supported M365 with Exchange, Azure, Office, SharePoint, Teams, Intune and OneDrive, increasing productivity and security

Skills

Network Monitoring Tools:

Solarwinds (Orion & Virtualization Manager), What's Up Gold Professional Edition, Quest Free Network Tools, Network Scanner, Ping Plotter 5, Advanced IP Scanner, Zabbix, Elastic Elk, Grafana

Operating Systems:

OnTap 8.2.1, Windows (10, 11, 2012/R2, 2016, 2019, 2022, 2025, Linux (Ubuntu 20, 22, Red Hat Linux Enterprise (8.6, 8.8)), Mac OS X, ESXi (6.0, 6.5, 6.7, 7.0, 8.0)

Software:

Microsoft (Azure, System Center Virtual Machine Manager (SCVMM)), Hyper-V 2019, Exchange 0365, Exchange Online Protection (EOP), Proofpoint, Forefront Online Protection for Exchange (FOPE), Office 0365, System Center Configuration Manager (SCCM), Microsoft Endpoint Configuration Manager (MECM), VMware VSphere ESXi/Client (6.0, 6.5, 6.7, 7.0, 8.0), VSphere Web Console 5.5, 6.0, 6.5, 7.0, 8.0), UCS Central v2.0(1p), OnCommand System Manager 3.2.1, NetApp Configuration Manager 3.0RC1, EMC (Unisphere v3.1.1, Unisphere Central 4.0.0), Cisco (Unified Computing System Manager 3.1 (1e), Databricks, McAfee Endpoint Encryption, CrowdStrike, Qualys 3.19.0.2-5, Commvault 9/10/11), Veeam 12 (Backup & Replication), BigFix Console v10/v11, Puppet, Cisco AnyConnect, ClearPass, Mimecast v4.0.17, Barracuda Control Cloud, PowerShell, Python, Atlassian (Jira, Confluence), Service Now, Service Desk, Asset Vision (Scalable), Manage Engine, Datadog, Databricks, Thycotic Secret Server 9.0, CyberArk v12.6.12, Visual Studio Code, MSIX Hero, Bitbucket, GitHub

Hardware:

DR Replication Appliance (Zerto), Web Filter (Barracuda 310), Load Balancers – (BIG-IP Configuration Utility (F5)), Citrix /ADC), Cisco UCS 5108 Chassis, Cisco B200 M3/M2 server blades, Cisco USCB-B2-M5 server blades, APC Smart-UPS Rack Mount, DELL PowerVault TL-2000

Storage (SAN/NAS):

Pure (Flash Array), NetApp FAS 2020/3240/8020/8040, EMC 3100/3150/CX300/VNX E, Cisco Nexus, QNAP (NAS)

Personal

Fully bilingual in English and Spanish, Excellent analytical and problem-solving skills, Rapport building with stakeholders
